

Supplemental Specification

- Push a written specification of the other, non-functional requirements for your system (i.e., the URPS and other requirement types from the FURPS requirements categorization) to your materials repo.

URPS - Usability, Reliability, Performance, Supportability. We need at least a total of 6.

Usability

1. Without the need of a tutorial or instructor, each user should be able to understand the app on first trial. It should be easy enough to understand.
2. The user interface for this app should behave similarly to other apps when responding to gestures such as two-finger slides, pinching and expanding.

Reliability

3. Modified data in a database should be updated for all users accessing it within 2 seconds.
4. The app should be able to complete the users purpose for as long as it is being used without crashing.
5. Response time must be less than 2 seconds.

Supportability

6. If upgrades are required, system should be able to handle this via the specified method.

Performance

7. In peak times, the system should be able to work well under stress.
8. When launched on other devices, the app should be able to run effectively.
9. Information displayed should always be the most updated one.
